

Device Management

Supporting your end-user productivity platform.

Overview

Concurrency helps clients to **manage devices, apps and content** by using integrated tools to ensure security, improve business processes, and free up IT staff time for other work by offering mobile device management (MDM) and mobile application management (MAM) both on-premises and in the cloud, all from a single console.

Because our expertise includes the full range of datacenter and device needs, we can ensure organizational success surrounding trends such as bring your own device (BYOD), and transitioning to UEFI and Secure Boot. To meet a wide range of mobile needs, we plan and deploy **Microsoft Enterprise Mobility Suite (EMS)** for improved user mobile productivity as well as secure management. For devices of all types, we help IT departments streamline software updates.
